Plastic Rocker Covers

Adding to Nason Engine Parts extensive range of external engine parts is our new product offering of Plastic Rocker Covers. Many modern engines use plastic components for external items such as Rocker Covers and Inlet manifolds. Traditionally these components were constructed from aluminium or tin and did not require replacing due to their superior material construction.

Nason's range of plastic rocker covers are typically replaced due to warping & cracking or the integrated PCV valve systems or integrated injector oil seals, which cannot be replaced separately from the rocker cover assembly.
